

Automotive Wheel Balancer

This precision wheel balancer is designed for accurate and efficient balancing of automotive wheels. It features a user-friendly interface, automatic data input, and multiple balancing modes to accommodate various wheel types and sizes.

Product Overview

Precision Automotive Wheel Balancer

This professional-grade wheel balancer is engineered to deliver accurate and efficient balancing results for a wide range of automotive wheels. Featuring a user-friendly interface and automatic data input, it simplifies the balancing process while maintaining high precision. It is designed to minimize vibration and extend tire life, making it an essential tool for high-volume automotive service centers and tire shops.

Technical Specifications

Suitable For

- Automotive Service Centers
- Tire Repair Shops

Performance Benefits

- Optimal wheel balance
- Reduced vibration
- Extended tire life

Key Features

Automatic Data Input, Multiple Balancing Modes, User-Friendly Interface
