

Automotive Wheel Balancing Machine

This high-precision wheel balancer is designed for automotive service centers. It features an advanced electronic system for accurate weight placement and imbalance detection.

Overview

Professional Automotive Wheel Balancer

This high-precision wheel balancing machine is engineered for the demanding environments of professional automotive service centers. It integrates an advanced electronic system that provides rapid imbalance detection and precise weight placement instructions. Built with robust construction and a user-friendly interface, it ensures consistent reliability and safety for a diverse range of wheel sizes and vehicle types.

Technical Specifications

Suitable Applications

- Automotive service centers
- Vehicle maintenance facilities
- Tire service workshops

Key Features

High-Precision Detection, Advanced Electronic System, User-Friendly Interface, Robust Construction
