

Automotive Wiring Harness Connector

This connector is designed for automotive wiring harness applications, featuring a robust housing with multiple pin receptacles for secure electrical connections. Pre-wired with insulated wires, it is ready for integration into existing automotive electrical systems, ensuring efficient power and signal transmission.

Product Overview

Automotive Wiring Harness Connector

This ten-hole connector is engineered specifically for automotive wiring harness applications, providing a reliable solution for complex electrical systems. The assembly features a robust housing designed to withstand harsh vehicle environments while ensuring secure and stable electrical connections. Pre-wired with insulated leads, this component is ready for immediate integration into automotive electronics, facilitating efficient power and signal transmission.

Technical Specifications

Pin Count	10
Connector Type	Wiring Harness Connector
Primary Application	Automotive Electronics, Wiring Harness, Signal Transmission, Power Distribution

Design & Construction

Key Features

- Robust housing construction
- Pre-wired assembly
- Secure crimped terminals
- Designed for durability

Housing Color	Black
