

Axial Fan Blade for Ventilation

This axial fan blade is designed for efficient air movement in ventilation and cooling applications. Its robust metal construction ensures durability and longevity in exhaust fans and other air-moving equipment.

Product Overview

High-Performance Axial Fan Blade

This three-blade axial fan is engineered for superior air movement in demanding ventilation and cooling environments. Constructed from robust metal, it ensures long-term durability and reliable operation in exhaust systems and air-moving equipment. Its aerodynamic blade design is optimized to deliver maximum airflow efficiency while keeping operational noise levels to a minimum.

Technical Specifications

Number of Blades	3
Construction Material	Robust Metal
Suitable Applications	Ventilation, Cooling, Exhaust Systems, Air-moving Equipment

Design Features

Design Highlights

- Aerodynamic blade profile for high airflow
- Noise reduction optimization
- Central hub for easy motor shaft mounting
- Durable metal construction
