

Baled Copper Wire Scrap

This copper wire scrap is baled for efficient handling and transportation. The reddish-brown scrap consists of compressed bare copper wire of varying gauges, making it suitable for recycling.

Product Overview

High-Purity Copper Scrap

This baled copper wire scrap, classified as 'Barley' grade, offers a consistent and high-quality source of raw material for industrial recycling and refining. With a minimum copper content of 99.5%, this material is optimized for efficient smelting processes. The scrap is compressed into dense, manageable bales to facilitate streamlined handling, storage, and cost-effective transportation for large-scale operations.
