

Benchtop Metal Lathe for Precision Machining

This benchtop metal lathe is designed for precision metalworking. It features variable speed control, a chuck, tool post, and tailstock for turning, facing, and threading operations.

Overview

Precision Benchtop Machining

This benchtop metal lathe is engineered for precision turning, facing, and threading operations. Designed with a robust construction for stability, it serves as a versatile solution for metalworking applications in small workshops. The unit features variable speed control, allowing users to optimize cutting speeds for different materials and operations while maintaining consistent accuracy.

Technical Specifications

Power Output

400 W

Motor Power

Machining Capabilities

- Turning
- Facing
- Threading
- Drilling
- Reaming
- Tapping
- Knurling

Speed Control

Variable Speed

Safety and Compliance

Safety Features

Chuck Guard • Emergency Stop

Certifications

CE

Components

Included Components

- Chuck
- Tool Post
- Tailstock
