

Bicycle Crankset with Multiple Chainrings

This bicycle crankset features multiple chainrings of varying sizes attached to a central spider and a single crank arm. The crank arm provides leverage for pedaling, transferring power from the rider to the drivetrain.

Overview

High-Performance Bicycle Crankset

This bicycle crankset is engineered for efficient power transfer, featuring multiple chainrings designed for smooth shifting and reliable performance. Built with a durable construction, likely aluminum alloy or steel, it offers the strength needed for consistent pedaling leverage. Its versatile design makes it a suitable upgrade or replacement component for various bicycle types.

Technical Details

Finish

Black Coating

Key Features

- Multiple chainrings of varying sizes
- Central spider design
- Optimized for smooth shifting
- Durable construction

Component Type

Bicycle Crankset

Material

Steel, Aluminum Alloy
