

# Biomass Pellet Production Plant for Wood and Agricultural Waste

The biomass pellet plant efficiently processes a variety of biomass raw materials, including wood, wood shavings, and agricultural waste. It is capable of handling EFB (palm kernel) and coconut shells.

## Product Overview

### Industrial Biomass Pellet Solution

This modular biomass pellet production plant is designed for the efficient conversion of diverse raw materials into high-quality energy pellets. The system encompasses the complete production cycle, including crushing, drying, pelletizing, cooling, and final packaging. Engineered for flexibility, it supports a wide array of feedstocks such as wood shavings, sawdust, agricultural straw, and various husks.

## Technical Specifications

### Production Capacity

**0.5 ton/h**

Minimum Capacity

**10 ton/h**

Maximum Capacity

### Process Stages

- Crushing
- Drying
- Pelletizing
- Cooling
- Packaging

## Compatibility

### Compatible Raw Materials

Wood, Wood shavings, Sawdust, EFB (Palm kernel), Coconut shell, Bagasse, Straw, Rice husk, Coffee husk, Grass

## Compliance and Quality

### Certifications

CE Certified • SGS Inspected
