

Bitumen Melting Equipment

This equipment melts bitumen using both burning air and oil heating. It features thermal oil heating, auto temp-control, and easy operation.

Product Overview

Efficient Bitumen Processing

This bitumen melting equipment is engineered for safety, reliability, and ease of operation in industrial road construction and pavement maintenance. By utilizing an efficient melting method, it effectively processes solid bitumen from barrels, bags, and wooden cases into a liquid state. Designed for low energy consumption and reduced environmental impact, this machine serves as a critical component for asphalt mixing plants and other industrial applications.

Performance Metrics

Product Capacity

3 t/h

Min Capacity

10 t/h

Max Capacity

Model Range

DJT-3000, DJT-5000, DJT-10000

Operational Specs

Suitable Applications

- Road construction
- Pavement maintenance
- Asphalt mixing plants
- General industrial heating

Barrels per Cycle

14 ~ 27
