

Blind Flange

This blind flange is a solid disk utilized to close off the end of a pipe or vessel nozzle. It is constructed as a circular plate, complete with bolt holes around the perimeter for secure attachment to a mating flange.

Product Overview

Professional Grade Blind Flange

A blind flange is a solid, circular plate designed to seal the end of a pipe system or vessel nozzle. It features a perimeter of bolt holes, allowing for a secure, bolted connection to mating flanges. This essential component is widely utilized for pressure testing pipelines and vessels, or for providing a permanent, reliable closure in industrial piping systems.

Technical Specifications

Design Features

- Solid circular plate design
- Perimeter bolt hole configuration
- Compatible with standard mating flanges

Product Type	Blind Flange
Primary Function	Pipe Sealing, Pressure Testing, Vessel Closure
