

Bluetooth Digital Body Composition Scale

This smart scale uses Bluetooth connectivity for comprehensive health tracking. It accurately measures weight and can estimate body composition metrics via a mobile application.

Overview

Smart Body Composition Analysis

This Bluetooth-enabled digital scale offers comprehensive health monitoring beyond simple weight measurement. Designed with a sleek, modern glass surface and integrated electrode contact points, it provides detailed body composition insights when synced with a compatible smartphone application. It serves as an ideal solution for personal health tracking in home environments.
