

Boiler Circulation Pump

This boiler circulation pump provides consistent water flow for optimal heating performance. It features robust construction and an energy-saving motor.

Product Overview

High-Efficiency Boiler Circulation Pump

This high-efficiency circulation pump is expertly designed for boiler and floor heating systems, ensuring reliable and consistent water flow for optimal thermal performance. Engineered with a self-lubricating ceramic shaft, the unit offers a significantly extended service life and quiet operation. It is an ideal solution for both residential and commercial heating applications requiring robust and energy-efficient circulation.

Technical Specifications

Noise Level

45 dB

Maximum Noise

Application Areas

Floor Heating, Heating Systems, Residential Heating, Commercial Heating

Design Features

Key Benefits

- Low noise operation
- Extended service life
- Self-lubricating components
- Energy-saving motor

Shaft Material

Self-lubricating ceramic
