

# Bolt and Pipe Threading Machine

This electrical round-steel pipe threading machine is designed for creating threads on bolts and pipes. It features a robust construction with a threading head, clamping mechanism, coolant system, motor, and control panel for automated operation.

## Product Overview

### Professional Threading Solution

This electrical round-steel pipe threading machine is engineered for precision threading on both bolts and pipes. Featuring a robust construction, it integrates a high-performance threading head with a reliable clamping mechanism and an efficient coolant system. Designed for versatility, this machine is an essential asset for manufacturing and construction environments requiring consistent, automated threading operations.

## Technical Specifications

Operation Mode	Electrical
Primary Applications	Bolt Threading, Pipe Threading, Manufacturing, Construction

## Key Features

### Included Components

- Threading Head
- Clamping Mechanism
- Coolant System
- Motor
- Control Panel
