

Braided Stainless Steel Water Connector with Elbow

This flexible water connector is made from braided stainless steel, ensuring durability and corrosion resistance. It includes a 90-degree elbow fitting on one end and a straight fitting on the other for easy installation in tight areas.

Product Overview

Professional Flexible Water Connector

This high-performance braided stainless steel water connector is engineered for durability and reliable operation in demanding plumbing environments. Featuring a versatile design with a 90-degree elbow on one end and a straight fitting on the other, it excels in tight-space installations where standard rigid piping is difficult to manage. The braided exterior provides excellent kinking resistance and physical protection, ensuring a long service life for residential or commercial water supply applications.

Technical Specifications

Construction Material	Braided Stainless Steel
Fitting Configuration	90-Degree Elbow, Straight Fitting

Application Details

Suitable Applications

- Faucets
- Toilets
- Plumbing Fixture Supply Lines

Key Benefits

Corrosion Resistant • Flexible Design • Kink Resistant • Easy Installation
