

Brass Shim Stock Roll for Machinery Alignment

This precision brass shim stock roll is ideal for shimming, spacing, and alignment applications in machinery and tooling. It is manufactured from high-quality brass alloy, providing excellent corrosion resistance and formability.

Product Overview

Precision Brass Shim Stock

This brass shim stock roll is engineered for critical machinery alignment, spacing, and shimming applications. Manufactured from a high-quality brass alloy, it offers superior corrosion resistance and excellent formability for complex tooling needs. Each roll maintains a consistent and uniform thickness throughout its length, ensuring reliable performance in industrial environments.

Material Properties

Material Composition	Brass Alloy
Key Features	Corrosion Resistant, High Formability, Uniform Thickness, Precision Engineered

Applications

Primary Applications

- Machinery Alignment
- Tooling Shimming
- Industrial Spacing
- Precision Adjustment
