

Brass Water Filter with Transparent Housing

This brass water filter is designed for HVAC&R systems, removing particulate matter from water lines. It features a transparent housing to visually inspect filter condition and a drain valve for cleaning.

Product Overview

Professional Filtration Solution

This brass water filter is engineered specifically for HVAC&R systems to ensure optimal performance by removing particulate matter from water lines. It features a durable brass construction combined with a transparent housing, allowing for immediate visual inspection of the filter condition without disassembly. The integrated drain valve simplifies maintenance, making it an efficient choice for professional water management applications.

Technical Specifications

Maintenance Features

- Transparent housing for visual inspection
- Integrated drain valve for easy cleaning

Construction Materials

Brass, Corrosion-Resistant Materials

Primary Application

HVAC&R Systems

Primary Function

Removal of particulate matter from water lines
