

# Bronze Machine Components

Precision-engineered bronze components are designed for demanding applications. These parts exhibit high strength, wear resistance, and corrosion resistance, making them suitable for use in various industrial settings.

## Overview

### Precision Bronze Components

These precision-engineered bronze components are designed for demanding industrial applications requiring high strength and durability. Engineered with wear and corrosion resistance in mind, they ensure optimal performance in critical mechanical systems. Each part is manufactured to stringent quality standards to guarantee reliability in various sizes and configurations.

## Technical Specifications

### Common Applications

- Bushings
- Bearings
- Gears
- Critical Machine Elements

<b>Material</b>	Bronze
<b>Key Properties</b>	High Strength, Wear Resistant, Corrosion Resistant

## Identification

### Part Identification

Identifier	Value
Model Code	MCA-1
Part Number	3301301
Batch/Ref	08-1
