

Building Integrated Photovoltaic Rooftop System

This system is designed for rooftop integration, providing a clean energy solution. Installed in Colorado, USA, it has a system size of 300 kW.

System Overview

Integrated Photovoltaic Rooftop Solution

This building-integrated photovoltaic (BIPV) system provides a seamless energy generation solution for residential rooftops. By blending modern solar technology with aesthetic architectural design, it allows for sustainable power generation without compromising the visual character of the buildings. The system is designed for high-performance energy output and long-term durability in varied climates.
