

Car Audio Bass Tube Subwoofer

This compact and powerful audio device enhances the low-frequency response in car audio systems. Featuring a cylindrical enclosure, it houses a high-performance subwoofer and integrated amplifier, delivering deep and impactful bass.

Overview

High-Performance Bass Solution

The Bass Tube Subwoofer is a compact and powerful audio device engineered to significantly enhance the low-frequency response in vehicle audio systems. Its cylindrical enclosure design optimizes sound dispersion while minimizing distortion, ensuring a clear and immersive listening experience. Designed for versatility, the compact form factor allows for flexible installation in various vehicle locations, making it an ideal choice for adding impactful bass without sacrificing significant cargo space.

Technical Specifications

Enclosure Design	Cylindrical Tube
Integrated Amplifier	Yes
Connectivity	Standard Audio Inputs, Standard Audio Outputs
