

Carbide End Milling Cutter Sets

These carbide end milling cutters are available in various sizes and types. They are suited for creating complex shapes and intricate details in metal, plastic, and composite materials.

Product Overview

High-Performance Carbide End Milling Cutters

These high-performance carbide end milling cutters are engineered for precision machining across a diverse range of materials including metals, plastics, and composites. Designed with a robust multi-flute geometry, they facilitate efficient material removal and deliver superior surface finishes in demanding applications. The solid carbide construction provides exceptional hardness and heat resistance, ensuring extended tool life and consistent performance in CNC and high-speed machining environments.

Technical Specifications

www.xinruico.com

Precision-engineered carbide end milling cutters for professional CNC machining applications.

Primary Applications

- Profiling
- Slotting
- Contouring
- Complex Shape Creation

Material Composition	Solid Carbide
Design Features	Multi-flute, High Wear Resistance, Heat Resistant

Ordering and Customization

Customization Options

Custom Sizes • Made to Drawing • Sample-based Production

Order Policy	Small orders are welcome and standard sizes are readily available.
