

Carbide-Tipped Circular Saw Blade for Wood Cutting

This circular saw blade is designed with carbide-tipped teeth for effective cutting of wood. It features expansion slots that reduce noise and prevent warping during use.

Product Overview

Professional Wood Cutting Performance

This circular saw blade is engineered for high-precision wood cutting applications. Featuring ultra micro-grain carbide tips, it ensures a smooth cutting finish and extended tool life. The steel body is computer-balanced and laser-cut to prevent warping, providing accurate and quiet operation for professional woodworking tasks.

Technical Specifications

Blade Material	Steel body with carbide-tipped teeth
Tip Type	Ultra micro-grain carbide

Performance Features

Key Benefits

- Smooth cutting finish
- Extended blade life
- Reduced operational noise
- High-precision accuracy
- Warp resistance

Manufacturing Standards	Computer-balanced, Laser-cut body
