

Carbide-Tipped Circular Saw Blade for Wood Cutting

This circular saw blade is designed for cutting wood and other materials. It features carbide-tipped teeth for extended life and precision, along with expansion slots to minimize heat and prevent warping.

Product Overview

High-Performance Cutting Solution

This carbide-tipped circular saw blade is engineered for professional wood cutting applications, offering versatility for both rip and cross-cutting tasks. The durable carbide teeth ensure extended tool life and consistent precision, making it an ideal choice for demanding projects. Designed with integrated expansion slots, the blade effectively manages heat dissipation to prevent warping during high-speed operation.

Technical Specifications

Cutting Capabilities

- Rip Cutting
- Cross Cutting

Blade Type	Carbide-Tipped Circular Saw Blade
Primary Material	Wood

Design Features

Key Features

Carbide-Tipped Teeth • Expansion Slots • High-Speed Steel

Heat Management	Yes
