

Carbon Fiber Electric Bicycle

This electric bicycle features a lightweight carbon fiber frame. It is powered by a lithium-ion battery, providing efficient power for urban commuting and recreational riding.

Product Overview

High-Performance Carbon Fiber E-Bike

This high-performance electric bicycle is engineered with a lightweight carbon fiber frame, balancing durability with portability. Powered by a reliable lithium-ion battery, it provides efficient power suitable for both urban commuting and recreational riding. The design integrates a robust drivetrain and responsive braking system to ensure a versatile and safe experience for modern cyclists.

Technical Specifications

Frame Material	Carbon Fiber
Power Source	Lithium-ion battery
Key Components	Lightweight Frame, Robust Drivetrain, Responsive Brakes, Durable Wheels

Usage

Intended Use

Urban Commuting • Recreational Riding
