

Cast and Forged Metal Components

These metal components are produced through casting and forging processes. The resulting parts are suitable for industrial and mechanical applications requiring high durability.

Overview

Industrial Metal Components

These cast and forged metal components are engineered for high-demand industrial and mechanical applications. The assortment includes essential hardware such as hinges, latches, and hooks, designed to provide superior durability and structural integrity. Utilizing both casting and forging manufacturing processes, these parts are built to withstand rigorous use in complex assemblies.

Manufacturing Details

Included Components

- Hinges
- Latches
- Hooks

Processes Used

Casting, Forging

Reference ID

31001
