

Cast Iron Air Compressor Pump for Industrial Use

This cast iron air compressor pump is designed for heavy-duty applications. It delivers high-pressure air for various industrial and commercial uses and includes cooling fins for efficient heat dissipation.

Overview

Industrial-Grade Air Compression

The UT-55 is a robust two-stage air compressor pump engineered for heavy-duty industrial applications. Constructed from durable cast iron, this unit is designed to withstand demanding environments such as workshops, construction sites, and manufacturing facilities. With a 5.5HP motor capacity and a displacement of 493 L/min, it provides a reliable and consistent air supply for professional operations.
