

Casting and Forging Shot Blasting Machine

This shot blasting machine is designed for cleaning and surface preparation of castings and forgings. It utilizes a high-velocity stream of abrasive media to remove scale, rust, and other contaminants, leaving a clean and uniform surface.

Product Overview

High-Efficiency Surface Preparation

This shot blasting machine is engineered specifically for the rigorous demands of cleaning and surface preparation for castings and forgings. By utilizing a high-velocity stream of abrasive media, it effectively removes scale, rust, and surface contaminants to ensure a uniform finish. The system integrates robust construction with an efficient abrasive recycling process and a dedicated dust collection system to maintain optimal working conditions.

Technical Features

Key Capabilities

- Heavy-duty construction for industrial use
- High-velocity abrasive media delivery
- Integrated abrasive recycling system
- Built-in dust collection system

Applications

Foundries, Forging Shops, Metalworking Industries

Performance

Surface Treatment Results

100 %

Scale Removal Efficiency

1 Grade
