

Centrifugal Clutch Assembly

This centrifugal clutch assembly is designed for small engines. It includes a clutch bell, clutch shoes, and a driven gear for transmitting power.

Product Overview

High-Performance Centrifugal Clutch Assembly

This centrifugal clutch assembly is engineered for small engine applications, providing reliable power transmission through a robust clutch bell and shoe mechanism. Designed to engage smoothly under centrifugal force, the system ensures efficient energy transfer to the driven gear. Its durable construction makes it an ideal solution for small motorcycles, scooters, and similar drivetrain configurations.

Technical Specifications

Included Components

- Clutch bell
- Clutch shoes
- Driven gear

Compatibility

KTM50

Design Features

Textured clutch bell, Metallic clutch shoes, Toothed driven gear
