

Centrifugal Inline Fan for Air Extraction

This high-performance centrifugal inline fan is designed for efficient air extraction and ventilation. It features a robust construction with a durable housing suitable for various applications.

Product Overview

High-Performance Air Extraction

This centrifugal inline fan is engineered for efficient air extraction and ventilation across diverse environments. Its robust construction ensures durability and reliable performance in residential, commercial, and industrial settings. Designed for optimal airflow while maintaining low noise levels, this unit offers a practical solution for professional air management needs.

Technical Specifications

Performance Features

- High-performance centrifugal design
- Optimal airflow efficiency
- Low noise operation
- Robust housing construction

Suitable Applications

Residential, Commercial, Industrial

Installation & Maintenance

Designed for ease of installation and straightforward maintenance.
