

Centrifugal Pump for Fluid Transfer

This centrifugal pump is a robust and efficient solution for fluid transfer applications. Its centrifugal design ensures smooth and consistent flow, making it suitable for demanding industrial environments.

Product Overview

High-Efficiency Fluid Transfer

The EHF series centrifugal pumps are engineered for optimal hydraulic performance, ensuring high efficiency and energy conservation in demanding industrial environments. Designed in accordance with UL448 safety standards, these pumps offer reliable fluid transfer for water treatment, chemical processing, and general industrial applications. Their robust construction, featuring dynamically balanced impellers and heavy-duty bearings, guarantees smooth operation and long service life.

Technical Specifications

Construction Materials

Cast Iron • Corrosion-Resistant Coating

Suitable Fluids

- Clean fluids
- Slightly contaminated fluids

Safety Standards

UL448

Design & Features

Key Design Features

- Dynamically balanced impeller
- Heavy-duty bearings
- Flanged connections
- Standard motor coupling

Applications

Typical Applications

Water Treatment, Chemical Processing, Water Supply, Irrigation, Industrial Processes
