

Centrifugal Slurry Pump

This centrifugal slurry pump is designed for handling abrasive, high-density slurries. It is suitable for industries such as metallurgy, mining, and construction, and can be installed in multi-stage series.

Product Overview

High-Performance Slurry Handling

The H Series centrifugal slurry pump is engineered for demanding industrial environments, specializing in the transport of both strong abrasive, high-density slurries and low-density, high-head mixtures. Its robust hydraulic design ensures reliable performance across critical sectors, including mining, mineral processing, coal, power generation, and building materials. Built for durability, this pump provides an efficient solution for operations requiring consistent solids transport and extended service life in harsh conditions.

Technical Specifications

Key Features

Heavy-duty construction • Wear-resistant materials • Optimized hydraulic design

Pump Type	Centrifugal Slurry Pump
Series	H Series

Application Suitability

Slurry Capabilities

- Strong abrasive slurries
- High density slurries
- Low density, high head slurries

Suitable Industries	Mining, Metallurgical, Coal, Power Generation, Building Materials, Chemical Processing
---------------------	--
