

Centrifugal Water Pump with Single-Phase Motor

This centrifugal water pump is designed for efficient water circulation in various applications. It is equipped with a single-phase motor and suitable for clean water applications, providing reliable performance for water boosting and irrigation.

Product Overview

Reliable Centrifugal Water Pump

This centrifugal water pump is designed for the efficient transfer and circulation of clean water and non-chemically aggressive liquids. Engineered for reliability and ease of use, it is an ideal solution for domestic and civil applications, including water distribution systems, pressure boosting sets, and garden irrigation. For optimal longevity and performance, the unit is intended for installation in enclosed environments or areas sheltered from inclement weather.

Technical Specifications

Pump Type	Centrifugal
Motor Type	Single-phase
Construction Materials	Cast Iron Pump Body, Durable Housing

Application & Usage

Intended Applications

- Domestic water distribution
- Civil water systems
- Pressure boosting sets
- Garden and allotment irrigation
- Liquid transfer

Fluid Compatibility

Clean water • Non-chemically aggressive liquids

Operational Requirements

Installation Environment	Enclosed or sheltered from weather
Duty Cycle	Continuous
