

Cereal Grain Grading and Separation Machine

This cereal grain grading machine is engineered for efficient separation and grading. It features a robust structural frame, adjustable inclination settings, and a multi-stage separation system.

Product Overview

High-Performance Grain Processing

This cereal grain grading and separation machine is engineered for high-efficiency processing in large-scale food manufacturing and agricultural facilities. It features a robust structural frame and a multi-stage separation system that ensures precision grading and minimal product loss. With adjustable inclination settings and a powerful motor, this unit is designed to optimize workflow and maintain consistent output quality.

Technical Specifications

Build Quality

Robust structural frame • Precision-engineered components

Separation Method

Multi-stage separation system

Adjustable Settings

Adjustable inclination
