

Check Valve

This check valve allows flow in a single direction. It prevents backflow in pipelines and systems.

Product Overview

High-Intensity Discharge (HID) Lighting Technology

This Xenon HID headlight bulb is engineered for advanced automotive lighting systems, delivering superior illumination through a specialized glass capsule containing xenon gas and metal halide salts. By generating a precise electrical arc between two electrodes, it produces a bright, white light optimized for visibility and safety. The unit features a robust plastic base with integrated electrical connectors and a built-in shield designed to control beam patterns and minimize glare.

Technical Specifications

Primary Application

Automotive Lighting • Headlight Assemblies

| | |
|------------------------|------------------------------------------------------------|
| Technology Type | Xenon High-Intensity Discharge (HID) |
| Construction Materials | Glass Capsule, Xenon Gas, Metal Halide Salts, Plastic Base |
| Beam Control | Yes |
