

Circular Elevator Cable

This circular elevator cable is designed for power and signal transmission. It features multiple insulated conductors arranged in a circular configuration with a protective outer jacket.

Product Overview

Circular Elevator Cable Solutions

This circular elevator cable is precision-engineered for reliable power and signal transmission in demanding vertical transport applications. Its robust circular construction incorporates high-quality insulated conductors to ensure consistent mechanical strength and long-term durability. Designed to withstand the rigors of elevator systems, the durable outer jacket provides essential protection against abrasion and environmental factors.

Technical Specifications

Durability Profile

- Abrasion resistant outer jacket
- High mechanical strength
- Environmental protection
- Flexible conductor arrangement

Construction Geometry

Circular

Applicable Circuits

Power, Control, Communication

Compliance & Usage

Primary Industry

Elevator Systems
