

Circular Metal Flange with Bolt Holes

This circular metal flange features a raised center hub and multiple bolt holes. It is suitable for applications requiring robust and leak-proof connections in piping systems.

Product Overview

Professional Grade Circular Metal Flange

This circular metal flange features a precision-machined surface and a robust design suitable for critical industrial piping systems. Engineered with a raised center hub and evenly spaced bolt holes, it ensures reliable, secure, and leak-proof connections. Its corrosion-resistant material construction makes it an ideal solution for demanding environments where structural integrity is paramount.

Technical Specifications

Design Features

- Circular geometric profile
- Raised center hub
- Precisely drilled bolt holes
- Concentric design for pipe connection

Material Composition	Stainless Steel, Corrosion-Resistant
Surface Finish	Smooth machined finish

Application

Primary Applications

Piping Systems • Industrial Connections • Sealing Applications
