

Clamshell Grab for Marine Material Handling

This heavy-duty clamshell grab is designed for shipbuilding and marine applications. The robust grab is engineered for efficient material handling in demanding marine environments.

Product Overview

High-Efficiency Marine Material Handling

This heavy-duty clamshell grab is engineered specifically for the rigorous demands of marine and shipyard environments. Its reinforced steel structure ensures long-term durability, while the high-capacity bucket design optimizes bulk material transfer efficiency. Equipped with precise hydraulic operation, it provides reliable performance for loading and unloading sand, gravel, and other loose cargo in ports and offshore facilities.

Technical Specifications

Suitable Materials

- Sand
- Gravel
- Bulk Cargo

Build Features

Reinforced Steel Structure • High-Capacity Bucket • Heavy-Duty Design

Operation Type

Hydraulic

Industry Use Cases

Shipbuilding, Port Logistics, Marine Construction, Offshore Platforms
