

Clean Water Submersible Pump

This submersible pump is designed for efficient drainage and irrigation. Its submersible design allows for operation directly in water, making it suitable for various applications such as agricultural irrigation, water removal from flooded areas, and general water transfer.

Product Overview

Clean Water Submersible Pump

This submersible pump is engineered for efficient drainage and agricultural irrigation tasks. Built with a robust cast iron body and aluminum motor housing, it offers durability for demanding water management applications. Its compact, portable design ensures easy transport and installation, providing a reliable solution for water transfer and flood removal.

Construction Materials

Pump Body	Cast Iron
Motor Body & Top Cover	Cast Aluminium
Impeller Type	Closed type, cast aluminium

Technical Specifications

Shaft Material	45# steel (SS304 optional)
Mechanical Seal	Ceramic/Graphite
Bearing Type	C&U

Installation Details

Cable Length	8 m
--------------	-----

Safety Guidelines

Operating Warnings

- Professional electrical installation required
- Do not operate with motor exposed above water surface
- Avoid dry running for extended periods
- Ensure water surface is clear of debris
- Disconnect power before maintenance
