

Cleaning Machine Bushing

This cleaning machine component appears to be a bushing or sleeve, possibly made from a composite material. It is likely used as a wear component or guide in a cleaning machine assembly, providing support and reducing friction between moving parts.

Product Overview

High-Performance Cleaning Machine Bushing

This precision-engineered bushing is designed as a critical wear component for industrial cleaning machine assemblies. Constructed from advanced composite materials, it features a robust cylindrical body with an integrated flange for secure mounting. Its specialized composition is optimized to provide exceptional support while effectively reducing friction between moving parts, ensuring smooth operation and extended service life for your equipment.

Technical Details

Design Features

- Cylindrical body
- Integrated flange
- Layered/Woven composite construction

Component Type	Bushing / Sleeve
Material	Composite Material, Fiberglass, Reinforced Polymer

Application

Primary Function

Wear component • Guide • Friction reduction
