

Cleaning Machine Electronic Control Board with LCD Display

Electronic control board designed for use in cleaning machines. It features an LCD display for status information and includes connection points for interfacing with machine components.

Product Overview

Advanced Electronic Control Interface

This electronic control board is designed for precision management of industrial cleaning machinery. It features an integrated LCD display for real-time status monitoring and numerical data visualization. The board is equipped with robust power regulation components, including a transformer, relays, and capacitors, ensuring reliable signal processing and timing control for complex cleaning operations.

Technical Specifications

Integrated Components

- LCD Display
- Transformer
- Relays
- Capacitors
- Resistors

Model Markings	P/S TDA-A-81, 12V-Y68, ZD
Primary Function	Timing and function control for cleaning machines
Interface Capability	Yes
