

CNC Carbide Threading Inserts

These CNC carbide threading inserts are engineered for precise and efficient threading operations. They offer excellent wear resistance and ensure consistent performance in demanding machining applications.

Product Overview

Precision Threading Solutions

These CNC carbide threading inserts are manufactured to rigorous ISO standards to ensure high-performance threading operations. Constructed from 100% new raw materials, they offer exceptional wear resistance and extended tool life for consistent results in demanding machining environments. Designed to provide reliable and accurate performance, they serve as a cost-effective alternative for professional industrial applications.

Technical Specifications

Material Quality	100% New Carbide Material
Standard Compliance	ISO Standard

Support & Service

Included Services

- Technical support provided
- After-sales service
- Custom sizing and grade options
