

CNC Hydraulic Press Brake for Metal Forming

This CNC hydraulic press brake is designed for precision metal forming operations such as bending, folding, and straightening. Its robust hydraulic system and CNC control enable accurate programming and execution of complex bending sequences.

Overview

Professional Metal Forming Solutions

The WY67K Series Hydraulic CNC Press Brake is engineered for precision metal forming, including bending, folding, straightening, and leveling operations. Featuring a robust hydraulic system and advanced CNC control, it delivers high accuracy and repeatability for complex bending sequences. This equipment is essential for high-performance applications across the automotive, aerospace, and construction industries.

Technical Capabilities

Core Features

- Advanced CNC programming control
- High-pressure hydraulic system
- Precision bending and folding
- Integrated operator safety system

Industry Applications

Industry Compatibility

Automotive, Aerospace, Construction, Metal Fabrication
