

CNC Lathe

This CNC lathe is designed for precision machining of various materials. It features a rigid structure for enhanced stability and accuracy.

Overview

High-Performance CNC Lathe

This high-performance CNC lathe is engineered for precision machining across a variety of materials. Featuring a rigid structure for enhanced stability and accuracy, it is equipped with an intuitive control system designed for efficient programming and operation. The machine is fully enclosed to ensure operator safety and noise reduction, making it an ideal solution for metalworking, prototyping, and small-batch production environments.

Technical Specifications

Model Number	CK6130
Key Features	High Speed, High Precision, Rigid Structure, Enclosed Design, Coolant System

Operation & Maintenance

Operational Capabilities

- Integrated coolant system
- Automated chip removal mechanism
- User-friendly CNC control interface
- Suitable for continuous operation

Applications

Primary Applications

Metalworking • Prototyping • Small-batch Production
