

CNC Lathe

This CNC lathe is a machine tool used for metalworking, offering precision turning, boring, and threading. It features a fully enclosed workspace and a control panel for programming and monitoring.

Overview

Precision Metalworking Capability

This CNC (Computer Numerical Control) lathe is a specialized machine tool engineered for high-precision metalworking tasks. It features a robust, fully enclosed workspace design that prioritizes operator safety while maintaining visibility. Equipped with an integrated control panel and digital display, it allows for efficient programming and real-time monitoring of complex machining processes.

Technical Specifications

Safety Features

Fully Enclosed Workspace

Model Identifier

CK6136

Machining Operations

Turning, Boring, Threading
