

CNC Lathe

This machine tool is designed for various machining operations. It is a CNC lathe used for turning operations on metal or other materials.

Overview

High-Precision CNC Lathe

This CNC lathe is engineered for precision turning operations on metal and various industrial materials. It features an integrated control panel, a robust safety enclosure, and an efficient coolant system to support automated manufacturing processes. Designed for high-quality output, it serves as a reliable solution for complex machining tasks.

Key Features

Core Capabilities

- Precision turning operations
- Automated manufacturing support
- Integrated coolant system
- Safety enclosure included

Control Interface	CELOS
