

CNC Lathe for Metal Machining

This CNC lathe is a machine tool used for machining cylindrical parts. It features a control panel with a display screen and a protective enclosure around the machining area.

Overview

CNC Lathe for Precision Metalworking

This CNC lathe is a robust machine tool engineered for the precise machining of cylindrical parts. Featuring an integrated control panel with a digital display, it allows for accurate operation and monitoring of the machining process. The unit is built on a sturdy base with a protective enclosure to ensure operator safety and stability during high-precision metalworking tasks.

Technical Specifications

Model Number	CK6130
Machining Capabilities	Cylindrical Machining, Precision Metalworking

Design & Construction

Build Features

- Protective safety enclosure
- Integrated control panel with display
- Sturdy industrial base
