

CNC Router with Automatic Tool Changer

This CNC router is designed for automated material processing and features an automatic tool changer. It is suitable for woodworking, plastic fabrication, and non-ferrous metal machining.

Overview

Efficient Automated Processing

This economic automatic tool changer CNC router is designed to streamline woodworking operations by reducing manual tool change time. Equipped with a reliable servo system and a vacuum table, it offers high stability and precision for various design requirements. The integration of a sophisticated control system helps protect the machine and ensures consistent, error-free production.

Technical Specifications

Tool Changer Capacity	8 tools
Model Number	PC-1325ATC

Key Components

Spindle Cooling	Water cooling
Control System	Syntec
Servo System	YASKAWA

Table & Construction

Table Material	Bakelite
Vacuum System	Yes

Certifications

Certifications	CE
