

Coaxial Cable for Video Camera Systems

This coaxial cable is designed for use in video camera systems. It transmits high-frequency signals, ensuring clear video and audio.

Product Overview

Professional Grade Video Transmission

This coaxial cable is engineered for high-performance video camera systems, facilitating the reliable transmission of both high-frequency video and audio signals. Designed with a high-quality copper conductor core and specialized insulation, it prioritizes signal integrity to ensure clear, interference-free performance. Its durable construction makes it an ideal solution for various demanding professional audio-video installations.

Technical Specifications

Key Design Features

- Copper Conductor Core
- Advanced Signal Insulation
- Durable Build for Reliability

Conductor Material	Copper
Primary Applications	Video Camera Systems, High-Frequency Signal Transmission, Audio Transmission
