

Combination Planer Jointer for Woodworking

This woodworking machinery combines planing and jointing functions. It features a robust metal construction and adjustable components for precise shaping and smoothing of wood workpieces.

Overview

Professional Combination Planer and Jointer

This high-performance combination machine is engineered for precision woodworking, seamlessly integrating planing and jointing functions into one robust unit. Designed with a heavy-duty metal construction, it provides the stability required for consistent material processing in professional workshops. The integrated adjustable fences and safety guards ensure high levels of accuracy and operational safety for various wood shaping tasks.

Technical Specifications

Model ID	MQ442D
Maximum Planing Width	200 mm

Features

Key Features

- Integrated combination planing and jointing
- Robust metal structural frame
- Adjustable fence system for precise edge jointing
- Safety-focused machine guarding
- Professional-grade motor drive

Compliance

Intended Use	Professional Woodworking, Material Smoothing, Workpiece Shaping
