

Combination Woodworking Machine

This combination woodworking machine is designed for versatile operations. It features a circular saw, planer, and thicknesser for cutting, shaping, and smoothing wood.

Overview

Versatile Woodworking Solution

This combination woodworking machine is engineered for high-precision versatility, integrating essential functions into a single robust unit. It seamlessly handles circular sawing, planing, and thicknessing, making it an ideal choice for comprehensive material processing. Designed with safety and accuracy in mind, the machine features adjustable controls and protective guards to ensure consistent, high-quality results for demanding workshop tasks.

Technical Specifications

Control Features

- Adjustable fences
- Precision hand wheels
- Integrated safety guards

Construction

Robust construction • High stability • Durable design

Integrated Functions

Circular Saw, Planer, Thicknesser
