

Commercial Building for Statistical Data Management

This multi-story building is designed for statistical data collection, analysis, and management. Its modern architecture includes glass-clad sections and a prominent sign displaying its function.

Overview

Facility Profile

The Statistics House serves as a dedicated facility for national data management, housing key governmental economic and statistical departments. Designed for high-capacity administration, the building supports the operations of the Ministry of Finance, Planning and Economic Development along with the Uganda Bureau of Statistics. It functions as a centralized hub for data collection, economic planning, and strategic development initiatives.
